
Recent Publications on the History of Mining

Compiled by Lysa Wegman-French

The following bibliography contains books, dissertations and theses, and articles and chapters of books—organized within those three categories—that provide new content related to the history of all types of mining in Canada, the United States, Mexico, and Central America. It does not include book review articles, nor reissued or subsequent editions of material.

Digital capabilities are changing our options for seeing works of interest. Some films and printed works are available for viewing on the internet. We have not included URLs for these, but check the internet for their availability. Moreover, some articles are available only on the internet; for these we have included the URL. In addition, many older books are now being reissued as e-books, and older films are being distributed as DVDs. We did not include them in this compilation since the content is not new. However, if you are interested in an older work, check to see if it is now available as an e-book or DVD (WorldCat.org is a good source for this information).

We thank all the members who have sent in contributions, and welcome suggestions for our next compilation.
